

ATALIS

AIXM Aeronautical database

The ideal central data repository for your Aeronautical Information.

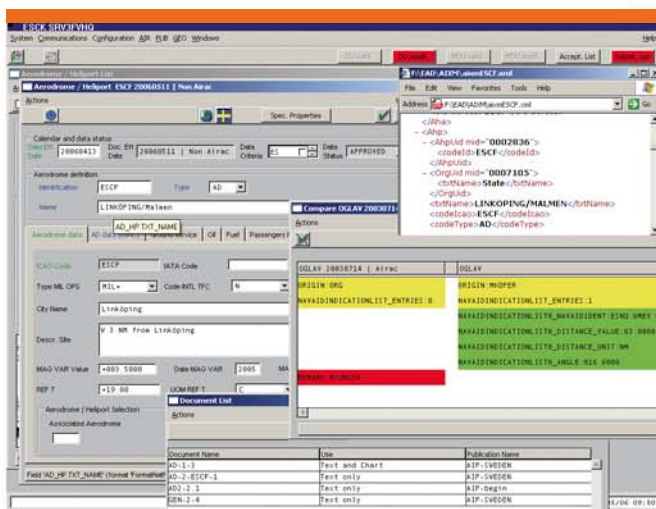

ATALIS AIXM database is the core of all ATALIS AIM products. It can be used as a standalone data originator environment, as a global data repository or as a support for AIP publishing.

ATALIS AIXM database is a complete AIXM database which also includes an efficient workflow, as well as all required imports and exports functions for all current standards.

Highlights

- Numerous extensions to AIXM: internationalization, extended features
- Standalone system for data originators or integrated with **ATALIS AIP** publication
- Implements AIXM and EAD interface
- Powerful workflow with enhanced data quality tool
- Graphical display in © Google Earth
