

# ATALIS

## Flight Movement Management

Provide your ATC staff with the ideal tool to manage efficiently flight information... at low cost!

**ATALIS Flight Movement Management** module provides Flight Management and Coordination support for controllers in Towers, Flight Information Centres and Area Control Centres.

**ATALIS Flight Movement Management** is the natural ATC extension to **ATALIS** Flight preparation which is part of the **ATALIS** modular Software Product dedicated to Aeronautical Information.

Combined with **ATALIS** General Information Management, **ATALIS Flight Movement Management** provides a powerful and a complete Tower or Approach system.

Automatic Flight Strip can be configured according to site settings in order to match any operational situation.

## Highlights

- Low Cost Air Traffic Control Automation
- Hot/Standby architecture for high disponibility
- Numerous interfaces with Airport systems
- User-friendly graphical HMI using Touch Input device screens
- Fully customizable stripping and event management
- Possibility to share display with **ATALIS** General Information Management
